Breaking Ground

Your Guide to Development in Sacramento County

January 2013

Sacramento County
OVERVIEW

The Sacramento County Development Services Guide provides information about how to work successfully with County development departments. Development projects may be simple, such as installing a water heater, or more complex, requiring planning and environmental review, engineering solutions and a public hearing process.

This guide will help you prepare and suggests what information to gather before contacting the County. Highlights of this guide include:

- Description of the development stages:
  - entitlements
  - civil improvement plans
  - building permit, and Construction
- Steps required for each stage
- Contact information
- information to gather before contacting the County
- Frequently Asked Questions
- On-line resources
- Contact information and web addresses

Our team provides development services to the unincorporated areas of the County. Services within cities are provided by the city organization.

The Appendix lists contact information of local government agencies and local districts.
PLANNING AND ZONING

If you are contemplating any land use changes to your property, it is important that you contact the Planning and Environmental Review Division first. The Division can assist you in determining whether your project is consistent with planning and zoning requirements. You may visit the Planning front counter or go to our website.

The Planning staff can assist you in the following ways:

- Filing an application for a discretionary planning entitlement, including General Plan Amendments, Rezones, Use Permits, and Variances
- Submit a Design Review application
- Sign-off on building permits
- Zoning checks on business license applications
- Public Convenience Liquor License
- Other inquiries related to allowed uses and development standards

Filing an application and Pre-Application Meetings:

If you need to file an application for a planning entitlement, our planners can assist you in determining exactly what kind of permit you need, how long it will take to process, and what fees are involved. For large projects, it is highly recommended that you schedule a Pre-Application Meeting (PAM). Staff from various departments will help guide you on project requirements. A fee is involved.

Key Contacts:

Planning & Environmental Review Planning
827-7th Street, Room 225
http://www.per.saccounty.net

Counter Hours of Operation:
8:30 AM – 4:30 PM
Monday through Friday

Email: sacplan@saccounty.net
Application Filing: Anytime by appointment – 916.874.6141
**Research Requests:**

If you need additional assistance beyond what can be handled at the front counter, you may file a research request. Examples include substantial compliance, records research, and letters of zoning verification. An hourly fee is involved.

**Design Review:**

Design review is required for all commercial, industrial, institutional and multi-family projects. You will need design review approval from the Design Review Administrator prior to submitting for a building permit.

**Website Resources:**

[www.per.saccounty.net](http://www.per.saccounty.net)

On the web you will find:

- Find the zoning of properties
- Find your parcel number
- Status of pending projects
- Current County General Plan
- Forms and Fees
- Additional Frequently Asked Questions
- County Zoning Code
- County Design Guidelines

Current topics in Planning

**Information needed:**

Property Address
Parcel Number
Clear idea of what you want to do with your property
Environmental Review

The Environmental Review Section prepares environmental documents pursuant to the California Environmental Quality Act (CEQA) for all discretionary projects within the unincorporated area of Sacramento County.

Review times vary based on the nature and complexity of the project. In some cases, state and/or federal agencies must jointly prepare and process the project’s environmental document.

Types of environmental documents include:

- **Exemption** - the project is considered either non-discretionary or is exempt pursuant to a category of the CEQA Guidelines.

- **Negative Declaration** - the project was determined to have less than significant impacts upon the environment and/or those impacts can be mitigated to a less than significant level.

- **Environmental Impact Report** - the potential exists for significant adverse impacts on the environment.

CIVIL IMPROVEMENT PLANS

Before having building plans prepared, contact the Site Improvement & Permits Section for infrastructure requirements and right-of-way information. When developing a property, owners are responsible for constructing street, drainage and sewer improvements, and, dedication of easements for publicly maintained improvements such as roadway, drainage and sewer facilities.

Most new construction and some additions require improvement plans. These plans must show road, drainage, sewer and on-site improvements. Improvement plan approval is required before building permit can be issued and construction must be completed before occupancy of any structures.

Improvement plans are prepared, signed and submitted by registered civil engineers. The civil engineer coordinates with the local fire district, water district and utility companies.

The County plan review members are dedicated to review and return plan check comments within 20 working days for new plan submittals and 10 working days for subsequent plan submittals.

**FINAL PARCEL & SUBDIVISION MAPS**

For projects that require lot changes, approval of a tentative parcel or subdivision map, and a recordation of final parcel or subdivision map will be required. All final maps must be recorded with the Sacramento County Recorder.

Once a project has tentative map approval, a registered civil engineer or a licensed land surveyor can be hired by the property owner to prepare and submit a final map application package to the Survey Section. The final map application must include tax, ownership and park fee requirements.

The final parcel or final subdivision map will be processed by the County Surveyor for approval by the Board of Supervisors. Final map review time varies depending on the project complexities.

**Information Needed:**
- Parcel Ownership Information
- Park Fee Requirements
- School Fees Payment Receipt
- Parcel & Subdivision Map
  - Appropriate Signatures - Engineer, Owner, Lender
- Title Company Information

BUILDING PERMITS & INSPECTION

Building projects fall into two groups: residential and commercial. Residential projects are home or home related construction. Commercial projects are retail, office, industrial, industrial and apartment houses of three or more dwelling units.

Both types may require a building permit and building plan submittal. The building plans must demonstrate what is to be constructed and building code compliance.

Number of plan sets required:

- three sets at permit application;
- one additional set for the County Assessor for new buildings and additions;
- three plan sets for Environmental Management-Environmental Health if a restaurant or food service facility;
- two additional sets of Sprinkler plans complying with NFPA 13D must be submitted directly to the Fire District.

Permit Locations:

**Downtown Permit Center**
827 7th Street, Room 102
Sacramento CA 95814
916.875.5296
916.854.9229 Fax
Permission Counter Hours:

Monday – Friday

**Branch Permit Center**
4101 Branch Center Road
Sacramento CA 95827
916.875.5296
916.854.9228 Fax
Permission Counter Hours:
8:30 AM – 4:30 PM
Monday – Friday

**North Area Service Center**
6015 Watt Avenue, Suite 4
North Highlands, CA 95660
916.874.2424
916.874.2632 Fax
Public Counter Hours:
9:00 AM – 4:00 PM
Open M – TH, Closed Fridays
Closed 12:00 PM – 1:00 PM
Building Permit: W & TH Only

**East Area Service Center**
5229 Hazel Ave, Suite B
Fair Oaks, CA 95628
916.876.5622
916.875.1537 Fax
Public Counter Hours:
9:00 AM – 4:00 PM.
Open M - TH, Closed Fridays
Closed 12:00 PM – 1:00 PM
Building Permit: M & TU Only
Building plan sets are submitted to Building Inspection who routes the plans to County Departments for review.

Building permits are required when:

- constructing a new building
- adding to or remodeling an existing building
- changing the use of a building
- conducting miscellaneous minor repairs such as re-roofing, or changing out a hot water heater, or changing out electrical or gas service.

Applications for permits can be handled at any office. Permits can be issued to properly licensed contractors, and owner/builders who accept full responsibility for the project. On commercial projects, tenants are also considered owner/builders for permit purposes.

During this stage, an actual building plan must be prepared that includes foundations, drainage facilities, structures, and utilities (electrical, plumbing, gas) that will be constructed. Utilities include sewer, water, electrical and gas. Submittal to other agencies for review may also be required.

Key resources for permitting include the State of California Building Standards Code and the County Building Code. These Building Codes are used to ensure that safety standards are followed and that the appropriate materials are used.

See next page for list of specific requirements for residential and commercial building plans.

Building Plan Requirements

**Residential Plans:**

- Assessors’ Parcel Number (APN) – need address
- Plot plan showing property lines, setbacks, drainage plan, SWPPP, as well as easements and distance to existing structures and location of new work
- Architectural plans including floor plans, roof plans, elevations, cross sections, details, and electrical items, name and contact info
- Structural plans showing foundation plans and anchorage, floor and roof framing plans and details
- Structural calculations as required (need PE #)
- Energy compliance documents as required

**Commercial Plans:**

- Plot plan showing property lines, existing structures and location of new work
- Architectural plans including floor plans, roof plans, elevations, details, and electrical items
- Structural plans showing foundation plans and anchorage, floor and roof framing plans and details – (must provide an additional set of plans if this information is provided)
- Structural calculations as required
- Energy compliance documents as required
- Mechanical plans showing equipment, ductwork, etc.
- Plumbing plans and calculations showing the fixtures, gas, connections to existing work, etc.
- Electrical plans showing panel schedules, load calculations, single line diagrams, lighting, equipment, switching, site work, etc.
- Parking lot photometric light plan
- Landscape drawing
- Food equipment plans (for restaurant)
- Civil drawings*
- Soils reports as required
- Pay fees when plans are submitted. Balance of fees due when plans are approved.

* Submit Civil Improvement Plans to Site Improvement & Permits Section

BUILDING INSPECTION

During this stage, a building inspector actually visits the building or facility location to check (inspect) that construction is consistent with the approved building plans and required building and safety codes.

The approved building plan includes information that shows where and how all foundations, structures, and utilities (electrical, plumbing, gas) must be constructed and installed for the project. All approved documents and plans must be onsite during construction and inspections.

Homeowners or their contractors contact Building Inspection and request an inspection at necessary stages in the construction process.

If the inspector finds problems with the construction, a “Notice of Correction” will be issued.

The problems must be corrected before calling for another inspection.

The contractor or the homeowner must request an inspection by calling 916.875.5381 or requesting an inspection on-line at: www.bldginspection.org

Information Needed:

To schedule an inspection: go to www.bldginspection.org to search the Permit database and/or schedule an inspection. Refer to inspection check list to determine when an inspection is required.

Enter information below to search the Permit database. Permits can be searched by entering any of the following information:
- General Search
- Site Address
- Contractor License Information
- Parcel Number
- Permit Information

Use the dropdown menu to change the Search type.

How to Schedule an Inspection

You must be a registered user and logged into your account to schedule inspections and select the correct inspection code. For full Permit search capabilities, log in to the Permit System or search capabilities are restricted to status searches.

1. Register for an account in the Permit system.
2. Login to your new account
3. Search for your Case
4. Scroll down & click on the underlined case number
5. In the Inspections section; Click the "Schedule" option to the right
6. The website only offers next day inspections
7. Select AM or PM but times are not guaranteed.
8. Enter in special notes or instructions and click the "Schedule Inspection" button
BUILDING INSPECTION, continued

Building Occupancy

The final stage of a project is occupancy. At this stage, construction is complete but cannot be occupied until the Certificate of Occupancy is obtained. Commercial and multi-family construction projects must obtain a Certificate of Occupancy. Occupancy rules are associated with the uses that will occur in the building. Certificates of Occupancy are issued when all work for which the Building Permit was issued is complete and has had a final inspection. A new certificate may not be required nor issued for existing buildings that are or have been legally occupied.

This may take several weeks to complete, as we need to collect reports from a number of agencies before the case can be closed and a certificate issued.

Please note that one and two-family residential dwellings do not receive a Certificate of Occupancy.

Certificate of Occupancies are issued at:

4101 Branch Center Road
Sacramento, CA 95827
916.875.5296
916.854.9229 Fax
Office & Public Counter Hours:
9:00 AM – 4:00 PM, Closed Fridays

E-mail: Bldg-Inspection-Info@saccounty.net

Information Needed:

- Case Number
  (example: CBNR2009-00000)
- Job Address
- Current return phone number so that we may contact you.
Intentionally Blank Page
ENTITLEMENTS

What are entitlements?
Entitlements are the rights that are granted to a land-use project once the project is found to be consistent with County, State and Federal regulations and laws. When an application is filed for a change in land use, the project is reviewed for compliance with the County General Plan, the Zoning Code, neighborhood design requirements, environmental laws, and other applicable State and Federal laws and regulations. Entitlements take the form of project approvals which may require conditions of approval which are requirements placed on the project based on technical review (e.g. traffic, sewer, fire, water, etc.), environmental review, and community concerns. A public hearing is required for discretionary entitlements.

What is the County General Plan and how does it apply to my project?
State Planning and Zoning Law and the California Government Code give local governments (counties and cities) the authority to create land use policies within their jurisdictional boundaries and the ability to create a General Plan policy document. The County General Plan provides a broad outline of future land use patterns in the unincorporated area of the County.

What fees are involved?
The Planning and Environmental Review Division charges fees based on time and materials. You will be provided a cost estimate at the beginning stages of the process. A deposit is made upon application.

What about Design Review?
Commercial, industrial, institutional and multi-family projects also require design review based on adopted Design Guidelines. This review is conducted concurrently with the application process. Design Review is conducted by the Design Review Administrator and the Design Review Advisory Committee (DRAC). There is a fee associated with this design review.

What types of entitlements are required?
The review process and types of approval are dependent on the details of the project. Some projects require a lengthy review and public hearing process to the County Planning Commission and the Board of Supervisors. Other projects will be simpler and can be approved by staff, the Subdivision Review Committee or the Zoning Administrator.

What technical review occurs?
The project details will dictate which County departments and non-County agencies must review the project application. Applications are referred to a wide variety of County Departments and non-County Agencies for comment and conditions of approval.
**Frequently Asked Questions**

**Cont.**

**What about community and neighborhood review?**
Applicants are highly encouraged to submit a Neighborhood Outreach Plan and meet with neighbors before and during the application process. The Community Planning Advisory Councils (CPAC) will hear the project and make a recommendation. The CPAC meetings are noticed to property owners within 500 feet.

**Once my project plan and/or map are approved, what is my next step?**
Once a project is approved, applicants may proceed to civil improvement plan preparation and building permit review. The details of this stage can be found in the sections following, titled Civil Improvement Plans and Building Permits in this document.

**CIVIL IMPROVEMENT PLANS**

**What is a civil improvement plan?**
A civil improvement plan shows where necessary improvements (e.g. curb, gutter, sidewalk, water lines, sewer lines, etc.) are to be installed within existing rights-of-way to support the proposed project. These improvements are designed and constructed pursuant to the County’s Improvement Standards and Standards Construction Specifications. Civil improvement plan may include the following:

- Streets, highways, and alleys
- Drainage
- Sewerage
- Street lighting
- Traffic Controls
- Water supply facilities and related public improvements;
- Set guidelines for all private works which involve drainage, grading, erosion control, trees and related improvements.

**When is a civil improvement plan needed?**
A complete plan is needed when a project needs streets, bikeways, grading, erosion control drainage facilities, sewerage, street lighting, water distribution systems, including any necessary dedications, easements and rights-of-entry are to be dedicated to the County for maintenance and operation.

**Do I need to hire an engineer to prepare the plan?**
Yes, a consulting engineer who is legally authorized to practice civil engineering in California is required to prepare and submit civil improvement plans.

**Does anyone other than the County have to review or approve the improvement plan?**
Yes, when a project is located within areas served by other public agencies (e.g. fire district or water district) those non-County agencies must review the improvement plan to make sure the project meets the Agency’s requirements.
Frequently Asked Questions Cont.

What are Improvement Standards?
Improvement Standards are adopted by the County Board of Supervisors and specify requirements for designing:

- streets,
- street lights,
- sound barriers,
- sanitary sewer,
- storm drain,
- grading,
- erosion sediment control, and
- placement of survey monuments

Where can I find the County Improvement Standards?
Sacramento County Improvement Standards can be found online and downloaded at:
www.engineering.saccounty.net/improvementstandards

Where do I submit my improvement plans?
Your improvement plan may be submitted to the Site Improvement & Permits Section (SIPS) at Downtown Permit Center. Electronic submission of improvement plan is preferred. Staff plan review and approval are accelerated.

Once the Civil Improvement Plan is approved, what steps are necessary to commence construction?
Prior to beginning any construction a pre construction meeting must be scheduled with the Construction Management and Inspection Division (CMID) at 875-2700. The Developer, Consulting Engineer, and Prime Contractor shall be present. Sub Contractor and Utility representative attendance at the discretion of the Developer. CMID will schedule County department representatives as necessary. Contractors are required to have the County Standard Construction Specifications and a copy of the Approved Improvement Plan at all times.

What are the Inspection requirements?
CMID shall inspect all grading and drainage during construction and any improvement that will ultimately be maintained by the County. Each phase of construction shall be inspected and approved prior to proceeding to subsequent phases.

What are the Inspection costs?
CMID charges an hourly rate for all inspection services. This rate is published annually. The charge includes field inspection, travel time, and associated office related tasks. Effective communication and efficient contractor scheduling can minimize costs. Work performed without inspection or non compliant work will result in higher costs. In addition, testing of materials utilized in the construction will be performed by the County Materials Lab on an hourly basis.
Frequently Asked Questions Cont.

What Contractor’s License is required to perform the construction of the Civil Improvements?
The Contractor must have a valid State of California Contractors license for the type of work being performed. Class A, General Engineering license allows for the construction of all work. Specialty licenses allow for listed types of work only.

BUILDING PERMITS

What is a building permit?
It is a document that gives permission to do something such as build a project.

Why get a building permit?
It’s the law. State law and County Building Codes dictate how buildings must be built to insure the safety of construction and the use of property. Proof of a building permit may also be needed for project financing.

What are Building Codes?
Building codes tell what, where, and how buildings can be built. Building codes insure that buildings are built safely and help make the community livable.

Where can I find the Building Code?
The Sacramento County Building Code can be located online at: www.Bldginspection.org

When is a building permit needed?
A permit is needed for building a new building, adding to or remodeling an existing building (including electrical, mechanical or plumbing installations or alterations), for swimming pools, sheds over 120 square feet (projected floor area-residential only) or nine feet in height, water heaters, signs, fences over six feet high, patio covers, screen rooms or when changing the use of a building. A permit is needed when altering an existing structure or, adding new structures.

How do I start?
Complete and submit a building permit application to Building Permits & Inspection.

Do I need to hire an engineer to apply for a permit?
Permits can be issued to properly licensed contractors and owner/builders who have completed an owner/builder verification form in addition to the permit application. If the work will be done by a licensed contractor, have the contractor apply for the permit in his or her name.

Who approves a permit?
Building Permits & Inspection approves and issues permits. Other County Departments may need to sign off before a permit is issued.

Does anyone other than the County have to review or approve the building permit?
Projects may also require review and approval by the fire, water and sewer district that serve the project.
Frequently Asked Questions Cont.

How much will a building permit cost?
Permit fees vary depending on the type of construction, square footage and/or valuation of the project. Fee estimates can be provided over the phone and fee schedules can be provided upon request. Fee calculators can also be downloaded from the Building inspection web site: www.bldginspection.org

Once fees are paid and building permit issued, what is my next step?
Commence construction and obtain inspection approvals prior to covering any work.

BUILDING INSPECTION

What is a building inspection?
A County building inspector visits a project to check/inspect the construction before that stage of construction is “covered” and before moving to the next construction stage. Inspections are conducted to insure that projects are built safely and as required by building code standards.

When is a building inspection needed?
Building construction must be inspected before any phase is concealed or “covered” by the next phase.

Do I need to hire a contractor to construct my project?
No, an “Owner-Builder” may act as the general contractor. When a homeowner does so, the homeowner assumes the responsibility for the overall job, which may include such things as State and Federal taxes, workers compensation insurance and other legal liabilities. Licensed contractors will assume this responsibility for a project when hired. Refer to the CSLB Website http://www.cslb.ca.gov/ to learn about contractor licensing.

What should I do to prepare for a building inspection?
Construct the project as required by the approved building plan. Call for an inspection before placing concrete or “covering” the construction and going to the next stage of construction. Be sure the project phase is actually complete and ready for inspection before calling. Inspection sequence will vary based on construction type and scope of work. Consult your inspector for the appropriate inspection schedule.

How do I schedule an inspection?
The easiest way is to use the automated inspection request system that allows you to schedule an inspection for the next work day or before 6:00 a.m. for the same work day. The system is available to callers seven days a week at 916 875-5381 OR via the website at www.bldginspection.org
Once my project receives final approval, what is my next step?

For home projects, once your inspector signs off the completed work, the building permit and project are complete. No certificate of occupancy is needed. Keep all records of your project in the event that you sell your home.

Commercial projects may receive a Certificate of Occupancy.
